

MECCA

MECCA
BRANDS

Signet helps MECCA introduce a sustainable eCommerce packaging solution which results in a 40% consumer uptake and a 30% reduction in warehouse packing time.

MECCA Brands is an Australian retailer that brings their customers the best in global beauty across their retail stores and online channels. The company offers a unique shopping experience across 100+ stores in Australia and New Zealand, featuring an extensive selection of products from over 150 beauty brands, complemented by exceptional service and expert beauty advice.

"We're always exploring new ways we can innovate and deliver on what our customers want. As part of our eCommerce business, we were looking to introduce new packaging alternatives, which would reduce our environmental impact and also enable us to get our customers' beauty goodies into their hands and homes as quickly as possible."
—Tom McGrath, MECCA Brands IT Delivery Manager.

As a result, MECCA engaged Signet to assist with the implementation of a sustainable packaging solution for their eCommerce business.

By choosing this option, MECCA's customers' online orders will arrive at their door in recycled and recyclable packaging, at no additional charge. MECCA's sustainable packaging solution is made up of three Signet products. **Geami by Ranpak** is used for wrapping MECCA's primary goods. **FillPak TT by Ranpak** is then used as a void fill inside the carton to prevent movement and transit damages. Finally, a paper-based tape is used to seal their recyclable carton once packed. The sustainable packaging solution has produced great results for MECCA.

"Since the implementation of our sustainable packaging solution, we've experienced a 40% consumer uptake without any advertising, which shows that the demand is there and our customers have really welcomed this option."

Along with providing an eco-friendly packaging solution for MECCA customers, this packaging approach has been simpler for their 3PL distribution centre to pack.

"Since working with Signet, MECCA has seen a 30% time-saving in packaging products going out to their customers."
— James Poulsen Signet General Manager of Sales and Procurement.

At Signet, we are continually striving to incorporate innovative lean and green packaging into our product range to help our customers on their sustainability journey and provide solutions in line with their sustainability goals.

Due to COVID-19, MECCA's eCommerce business had experienced an increase in online orders because of the temporary closures of their retail stores.

Signet worked with the MECCA operations team to optimise the packaging process and ensure they have a steady supply of sustainable packaging materials to fulfill their orders and meet customer demands.

As a result, Signet's sustainable packaging offering has experienced an even greater consumer uptake.

"During this time, Signet has helped MECCA meet its increased customer demands while providing a sustainable packaging solution that creates a minimal environmental impact."

Signet is proud to support MECCA and over 60,000 other Aussie ventures.

Ranpak®

Paper Cushioning & Void Fill

Signet is a leading Australian distributor of Ranpak systems for small packing operations through to large, high volume users. Ranpak uses 100% FSC® Certified paper to provide a sustainable and eco-friendly packaging solution that reduces time and material used, resulting in significant cost savings.

As the global leaders in paper packaging, Ranpak products can be found in the automotive, electronic, glassware, warehousing, homewares, and medical industries, just to name a few.

FillPak® Trident™ Machine

This machine shapes FillPak® protective paper into its unique, patented triangular pad shape, to provide superior protection with less paper when compared to traditional protective paper options.

(Trident™ Machine, see page 47)

For more Ranpak packaging solutions, scan the code or visit signet.net.au/ranpak

PadPak® Cushioning is a paper cushioning solution used to protect heavy and/or fragile items during shipping. The patented PadPak pads help to absorb the shocks and vibrations faced during transit, reducing the likelihood of damages and subsequent returns.

(PadPak® Paper, see page 50)

FillPak® Void Fill is a versatile paper void fill solution, providing an effective way to fill empty spaces in a box, and preventing your products from shifting around during transit. When items are firmly locked in place, the potential for damage is greatly reduced.

(Ranpak FillPak® Go, see page 46)

The **FillPak® TT Machine** converts **FillPak® Packaging Paper** into a patented PaperStar™ design. As a clean, efficient, reliable, and flexible void fill solution, it dispenses paper packaging on-demand at high volumes, so less packaging material is required.

Customer Case Study

Byron Bay Crackers

Signet's Packaging solution helps Byron Bay Crackers eliminate breakages during transit and improve supply chain efficiency.

Nestled in the heart of New South Wales' popular coastal town lies Byron Bay Crackers. What began as a humble Danish recipe for Knaekbroed quickly transformed into an award-winning success story, blending tradition with innovation to create something truly special. Today, the business has expanded to offer four distinct varieties, supplying local cafés, wholesale distributors, and customers through its eCommerce store.

"We are a family of local people that make delicious, handmade, seeded crackers here in our little kitchen in Byron Bay."
– Sarah McGrory, Byron Bay Cracker Founder.

It didn't take long for word to get out about the new crackers in town, and orders started piling in. But as business ramped up, the team quickly discovered that their fragile product required a tough void fill solution for extra protection during transit.

"I learnt the hard way when some of our orders were arriving damaged and broken."

As a startup business, we didn't have the resources to afford an expensive solution."

Determined to find a reliable yet affordable packaging solution, Sarah turned to Signet. After a successful trial, Signet's **Newsrap Sheets** became an essential part of their packaging process, ensuring each order arrived intact.

"Since implementing the Newsrap Sheets our products always arrive in perfect condition, we have eliminated breakages and customer feedback has improved."

Newsrap Sheets are a cost-effective and eco-friendly void fill solution. Made from 30% recycled materials, this product is ideal for protecting light and fragile items during transit, to help your items arrive in perfect condition.

Byron Bay Crackers use the **Newsrap Sheets** alongside Signet Gloves to maintain hygiene and safety during production. For shipping, they rely on Signet Shipping Cartons for secure transport and seal their packages with a strong Packaging Tape.

Not only has the introduction of **Newsrap Sheets** improved brand perception, but having one supplier

to meet all of Byron Bay Cracker's packaging requirements has helped increase efficiency.

"We've been using Signet since day dot! The online ordering process is so easy, products arrive quickly and it's convenient to order from the one supplier. It helps us continue running and growing our small business!"

Signet is proud to support Byron Bay Crackers and over 60,000 other Aussie ventures.

Customer Case Study

ADesignStudio

ADesignStudio.

After eliminating plastic from their packaging, lighting designer and manufacturer ADesignStudio turned to Signet's eco-friendly alternatives, enhancing sustainability while creating a more premium unboxing experience for their customers.

A side hustle turned fully-fledged business, ADesignStudio is an award-winning lighting design and manufacturing studio. Founded in 2016 by Alex Fitzpatrick, the studio proudly creates bespoke light fittings for restaurants, hotels, and high-end residential projects across the globe.

Alex found that packaging his lights in traditional forms of bubble wrap and plastic, although a necessary component to protecting goods in transit, failed to reflect the premium quality of his designs for consumers once their goods arrived.

"For us, packaging is extremely important because if we have to fix something that's broken, it costs us a lot. So, if we are selling a high-end product and it breaks in transit, it can be quite detrimental to the customer. If you have a product that's of high quality, it also needs to have the right packaging, otherwise it doesn't quite speak to its worth." – Alex Fitzpatrick, ADesignStudio, Owner and Founder.

With an informal mission statement to 'raise the bar', Alex explored how he could better align his packaging, whilst also looking to improve on his broader impact on the environment.

"Every time we produce something we try to 'raise the bar'. With our designs, we are always trying to provide something of value that also has a nice story and reason behind it. As our packaging (or unpacking) is part of this story, we looked to consider our footprint and ultimately raise our eco-standard in the process."

After discovering Signet online, Alex replaced traditional bubble wrap and plastic packaging with Geami WrapPak – an eco-friendly alternative that combines 3D honeycomb paper and white tissue to safely protect fragile items in transit. The ADesignStudio team also swapped out conventional packing peanuts for Signet's compostable **BioFill**, which dissolves in water, further enhancing their commitment to sustainable packaging.

Together, these products help safely secure and cushion each ADesignStudio creation before the team seals every

Shipping Carton with Kraft Paper Tape, a 100% recyclable alternative to plastic tape.

"With Signet, we have been able to cut 100% of plastic out of our shipping processes, all without compromising on our ability to protect our pieces in transit. Signet has great products, great choice and it's just as easy to place a more eco-friendly order."

Signet is proud to support ADesignStudio and over 60,000 other Aussie ventures.
